## Abstracts

EVTOL (electric vertical takeoff and landing) is a type of aircraft that uses electric power to hover, take off, and land vertically. This technology came about thanks to major advances in electric propulsion (motors, batteries, electronic controllers) and the growing need for new vehicles for urban air mobility (air taxi). Evtol is an electric aircraft that is distinguished by electrification, automated control and the possibility of vertical take-off and landing. Due to its efficiency, noiselessness and the fact that a small "patch" of ground is enough for vertical take-off and landing, Evtol craft can make flights a common form of movement of earthlings in space. The electric vtol (EVTOL) aircraft industry can be broken down into several segments, electric, hydrogen fuel cell, hybrid, etc. Across the world, the major players cover volocopter gmbH, beta technologies, embraer S.A., Lilium GmbH, Archer Aviation, Joby Aviation, Jaunt Air Mobility, Wisk, Airbus, Ehang, etc.
