Abstracts

Electric Cryotherapy Chamber is a luxury device that evenly reduces body temperature over the course of one to three minutes in order to achieve a number of attractive benefits such as diminished inflammation and soreness, stimulated collagen production and increased energy levels. Electric cryotherapy uses a vortex cooling system which permits a highly oxygenated air chamber to cool the whole body during a treatment session. It calls for the entire body to be exposed to cold temperatures, so that a uniform drop in skin temperature can be achieved, and so the brain can be stimulated into responding to this cooling. Whole body cryotherapy (WBC) is the therapeutic application of extremely cold dry air, usually between -110°C and -140°C .
