Abstracts

An electrical enclosure refers to a closed cabinet that houses various equipment such as power generators, transformers and telecommunication devices along with various other components such as mount switches, knobs and display monitors. They are used to prevent the damage resulting from accidental contact by users and add to the aesthetic value of the space. The enclosures can be both metallic and non-metallic depending upon their application and the preference of the end user. Electrical enclosures seal tightly and prevent penetration of water or moisture. They also protect against electromagnetic interference, electrical breakdown and power dissipation. They find extensive applications in locations with potential risks of flammable gasses, combustible dust and volatile vapors or particles.
