## Abstracts

This report studies the Electroactive Polymers market, Electroactive Polymers are polymers that exhibit a change in size or shape when stimulated by an electric field. A typical characteristic property of an EAP is that they will undergo a large amount of deformation while sustaining large forces. In the field of “active materials”, electroactive polymers stand out due to their large active deformation potential, high response speed, low density and improved resilience. They are extremely lightweight, inexpensive, fracture tolerant and compliant
