Abstracts

Electromagnetic navigation bronchoscopy (ENB) is an innovative procedure using electromagnetic technology, which allows steer ability and movability to obtain tissue samples of lung masses. ENB enhances the ability for physicians to diagnose and potentially treat a variety of lung diseases, including lung cancer. Physicians use specialized software to digitally identify targets using images from CT scans and then guide a bronchoscope to the target. By manipulating a variety of small, flexible tools inserted through the bronchoscope, physicians are able to image and biopsy mediastinal lymph nodes and distal lesions.
