Abstracts

Electronic gastroscope is a kind of medical electronic optical instrument that can be inserted into the human stomach cavity for direct observation, diagnosis and treatment of gastrointestinal diseases. It is mainly composed of objective system, image array surface photoelectric sensor and A/D conversion integrated module. The object in the stomach cavity is imaged onto the image array photoelectric sensor through the tiny objective system, and then the received image signal is transmitted to the image processing system, and finally the processed image is output on the monitor.
