## Abstracts

Electronic security managed services also mean managed security services (MSS). MSS is a service that monitors digital security events and provides cybersecurity tools to enterprises, without draining talent resources from the enterprise itself. An MSS can be relied upon to manage an enterprise's IT security services through a remote security operations center (SOC). MSSs should provide enterprises with the essential cybersecurity tools and apparatuses, including networking monitoring, firewalls, security gateways, endpoint protection platforms, and identity and access management.
