Abstracts

Soldering is a joining process whereby a non-ferrous filler metal, alloy is heated to melting temperature (below 800°F) and distributed between two or more close-fitting parts by capillary attraction. At its liquidus temperature, the molten filler metal interacts with a thin layer of the base metal, cooling to form a strong, sealed joint due to grain structure interaction. The soldered joint becomes a sandwich of different layers, each metallurgically linked to each other.

The soldering process uses filler metals in solid form (such as rings and wire, slugs, washers, powder) as well as soldering paste. This report focus on Electronics Interconnect Solder Wires market.
