On the basis of type, the elastomeric membrane market has been segmented into sheet and liquid applied elastomeric membrane. The market for sheet membrane type of elastomeric membrane is the largest due to its superior performance and increasing demand for flat roofs in non-residential buildings. Sheet membranes such as TPO and EPDM are widely used in the enhancement of energy efficiency of buildings. High demand for green roofing in green buildings is expected to trigger the use of sheet membranes. The liquid applied membrane is the fastest-growing type owing to its seamless installation, convenience associated with its use, and availability of less expensive grade products as compared to sheet membranes.
