In general, elevators include the escalators and the moving walkways. An escalator is a moving staircase used as transportation between floors or levels in subways, buildings, and other mass pedestrian areas. A moving walkway or moving sidewalk, travelator, is a slow-moving conveyor mechanism that transports passengers across a horizontal or inclined plane over a short to medium distance. The difference between the escalator and the moving walkway is the former has stairs and the latter is a flat or slant apron without stairs.
