Abstracts

With the advancement of electronic devices such as computers, cell phones, and roaming systems around the world, EMC shielding has become a significant concern. High gas emissions also fuel the need for EMC shielding due to fluctuations in power supply, increased clock frequency, rapid kill rates, increased packing capacity, and greater demand for smaller, lighter, cheaper, and less expensive materials such as power devices. This has led to the emergence of a number of directives and regulations in favour of EMC shielding and test equipment from their suppliers. Reliable EMI shielding contributes significantly to the machine's reliability, thus providing a useful marketing proposition for manufacturers of system systems and equipment. EMC shielding safeguards electronic devices from corrosion and oxidation. At the same time, materials such as metals, plastics, and active polymers can be used to control electromagnetic radiation. Steel is usually the best way to protect EMC; however, due to its heavyweight and high cost and being vulnerable to environmental degradation, it is not selected as the EMC shielding agent in current electrical equipment. While polymeric composite materials are light in weight and cheap to make, they do not have the protective power of EMC. The cost of EMC shielding solutions usually includes compliance testing costs in accordance with defined standards for a number of procedures such as cleaning, loading and unloading, and face masking. These additional costs increase the total cost of the final product. Many manufacturers of electronic types consider EMC shielding in the design phase and design type that is expected to meet the target market's needs. If manufacturers fail to achieve the EMC shielding, they desire, they need to find different shielding solutions to keep their product in the target market without interfering with product design. This is also expected to increase the product's final cost and increase its marketing time. Therefore, the high cost of EMC shielding hinders the market growth.
