Abstracts

The electric heat tracing market, based on type, has been segmented into self-regulating, constant wattage, mineral-insulated, skin effect. Self-regulating is the leading type of heat tracing cables and is expected to dominate the market during the forecast period. Self-regulating heating cables increase power as the temperature drops, and decrease power as the temperature rises; hence, they are more energy-efficient than any Others type of cables. These systems have a long lifespan and require less maintenance, which is also one of the prime reasons that they are preferred for various applications. Hence, self-regulating cables are expected to boost the market for electric heat tracing systems.
