Electromagnetic compatibility (EMC) is the ability of an electrical device or circuit to function within its electromagnetic environment without causing electromagnetic interference (EMI) to the Others devices in the system, and it must be electromagnetically susceptible or immune so that it could protect itself against external electromagnetic waves. Sources of EMI can be natural, which include lightning, or it can be manmade, either intentional such as radios, TVs, and cell phones' interference or unintentional such as interference generated from electric poles and consumer electronic devices. Increasing numbers of electronic devices and their interaction signifies that suitable electromagnetic compatibility (EMC) is more crucial today than ever before. Various test equipment such as EMI test receiver, signal generator, amplifier, and ESD simulator are used to perform different immunity and emission tests.
