Abstracts

Endoscopy Ultrasound (EUS) combines ultrasound technology with endoscopy to gain an internal vantage point to obtain higher resolution ultrasound images. While conventional endoscopy only provides a view of the innermost lining of the digestive tract, or its wall, the addition of ultrasound allows the physician to see beyond that wall to visualize all five layers of the GI tract as well as surrounding tissue and organs.

Based on product, the global endoscopy ultrasound market can be classified into endoscopes, ultrasound probes, ultrasonic processors, imaging systems, needles, and accessories.

EUS plays an important role in diagnosing diseases of the pancreas, bile duct, liver, spleen and gallbladder as well as the staging of cancers.
