Fluid injected in the bowel by rectum is known as enema. Stool evacuation can be stimulated by enema administration technique, which involves a liquid treatment to treat severe constipation. It is a process which helps to push out the waste from the rectum. Enema cleansing may relieve Constipation, fatigue, headaches, and backaches. During a cleansing enema, the movement of the large intestine is stimulated by using a water-based solution with a small concentration of stool softener, baking soda, or apple cider vinegar. A cleansing enema stimulates the bowels to quickly expel any impacted fecal matter.
