Energy recovery unit, with common name variations including ERV air exchangers and ERV ventilation systems. ERVs are systems designed to be connected to the ducts that are part of your HVAC system. By way of two fans, ERVs draw clean, fresh air into a home or office and remove stale air. Systems feature a patented heat exchanger which facilitates the transference of heat and moisture between the air streams. This way, your home will retain its heat during the process, something particularly significant during the winter months.
