Abstracts

Engineering plastics are a subset of thermoplastics that are used in high-performance applications. They have the ability to outperform commercial materials, such as wood, metal, or thermoplastics, in one or more areas of application. Engineering plastics are blended with additives and fillers such as antioxidants, antistatic agents, blowing agents, colorants, coupling agents, curing agents, heat stabilizers, UV stabilizers, flame retardants, or nucleating agents to produce engineering plastic compounds. These engineering plastic compounds offer superior physical properties that augment their performance for various automotive, electronics, industrial, medical, and consumer goods applications.
