Abstracts

An intranet is a restricted and private communications network hosted online. Each intranet is typically accessible by a specific group of people, such as the members of a team or company. Enterprise Intranet Solution exist to provide staff with a centralized location to work together, share media, communicate, train, provide and receive feedback, or otherwise collaborate on a variety of tasks. Employee intranet solutions allow companies to cherry-pick or bundle features from other types of software like internal communications software or business content management software. If the intranet doesn't provide a feature natively, it will often integrate with common or frequently used software solutions and enable users to access it from inside the intranet portal.
