Abstracts

An Enterprise Low-code application platform (LCAP) provides rapid application development and deployment using low-code and no-code techniques such as declarative, model-driven application design and development together with the simplified one-button deployment of applications. An LCAP typically creates metadata and interprets that metadata at runtime and abstracts the underlying server infrastructure for ease of use; many also allow optional procedural programming extensions. LCAP supports: • UI capabilities via responsive web and mobile apps • Orchestration or choreography of pages, business process, and decisions or business rules • Built-in database • 'One button' deployment of applications
