Epoxy phenol novolac (EPN) resins contain more than two epoxy groups per molecule and are therefore described as multifunctional epoxy resins. In other words they are polyepoxides obtained by reacting a phenolic novolac resin with epichlorohydrin. When cured, they provide a high cross-link density due to the increased epoxy functionality.

Typically, EPN resins are used in high temperature resistant adhesives, corrosion resistant marine coatings, maintenance coatings, industrial coatings, tank linings, pipe coatings, primers in automotive, coil & appliances, manufacturing of epoxy vinyl esters, etc.
