Abstracts

The hardener, which is essential to use with epoxy resin as a reactant, is a key material that determines the physical properties of the resin.

Epoxy resin hardener or hardener for epoxy resin, also called epoxy curing agent or epoxy hardener. The curing process is a chemical reaction in which the epoxide groups in epoxy resin reacts with a curing agent (hardener) to form a highly crosslinked, three-dimensional network. In order to convert epoxy resins into a hard, infusible, and rigid material, it is necessary to cure the resin with hardener. The products are available for a wide range of civil engineering, infrastructure and other building & construction applications.
