Abstracts

Essential oils and plant extracts are being increasingly used as an important animal feed ingredient as they help improve the quality of feed, which will thereby have a positive impact on the overall health and performance of animals. This, in turn, helps enhance the quality of food products obtained from these animals. Plant extracts mainly consist of proteins, oligosaccharides, peptides, fatty acids, micro minerals, and vitamins. They typically belong to the classes of isoprene derivatives and flavonoids. Plant extracts such as clover, cinnamon, and capsicum benefit animals by improving feed conversion rates and average daily gain. Moreover, feeding natural extracts to cows is known to reduce dairy farm odor and overall feed costs.
