Abstracts

Ethylene Diamine Tetra (Methylene Phosphonic Acid) Sodium is a nitrogen-containing organic polyphosphonic acid, which is a cathodic corrosion inhibitor. Compared with inorganic polyphosphate, the corrosion inhibition rate is 3 to 5 times higher. It is miscible with water, non-toxic and non-polluting, with good chemical stability and temperature resistance, and still has a good scale inhibition effect at 200 °C. EDTMPS can dissociate into 8 positive and negative ions in aqueous solution, so it can chelate with multiple metal ions to form multiple monomer structure macromolecular network complexes, which are loosely dispersed in water, so that the normal crystallization of calcium scale is destroyed. EDTMPS has good scale inhibition effect on calcium sulfate and barium sulfate scale.
