Abstracts

Ethylene propylene rubber is a copolymer of ethylene and propylene (EPR) combined with a third comonomer diene (EPDM). It is used as packing material. Ethylene propylene has excellent water resistance and it retains this property up to temperatures as high as approximately 120-140°C. On a contrary, ethylene propylene rubber has poor resistance to mineral oil and fuel. Ethylene propylene rubber is classified under two different type including ethylene propylene monomer (EPM) and EPDM.
