Abstracts

Ethylene tetrafluoroethylene occurs in the form of fluoropolymer, which is referred as ETFE. It is lubricious plastic with a low coefficient of friction; thus, it is used in the abrasion protection application. In the production of ethylene tetrafluoroethylene monomer, tetrafluoroethylene is converted into polymer ethylene tetrafluoroethylene by a polymerization process, where it does not use any solvent. The material can be expelled in varying thicknesses depending on the application. Ethylene tetrafluoroethylene is capable of bearing tough environmental conditions and high temperatures thus it is a good choice in a number of applications which includes instrumentation, medical, nuclear, aerospace, and industries. Ethylene tetrafluoroethylene is used in the automotive industry in the ABS braking systems, oxygen sensors, seat heating systems, and brake wear sensors.
