## Abstracts

Ethyleneurea also known as 2-imidazolidinone, ethylene urea, etc., is an important member of imidazole series compounds and is an efficient formaldehyde trapping agent. Excellent tear and wrinkle finish for everyday textiles. Due to its advantages of low toxicity, high polarity and high safety, 2-imidazolidinone and its derivatives have become important intermediates in the synthesis of medicines and pesticides, and are widely used in the synthesis of various antibiotics and pesticides. In addition, imidazolone compounds can also be added to metals as corrosion inhibitors to inhibit the corrosion of metals. Therefore, it has a broad market prospect, especially the high-purity 2-imidazolidinone and its derivatives have become the scarce fine chemicals.
