## Abstracts

Drug delivery systems are engineered technologies for controlled release of drugs or to the targeted delivery of drugs. Drug delivery system is a kind of formulation that enables the administration of therapeutic agents in the body and improves its safety and efficacy by controlling the time, rate and place of drug release in the body. Most of the conventional oral products of drugs are formulated to release the active ingredient as soon as it is administered. Now the pattern has been changed to modified release dosage forms to achieve better therapeutic target. Extended release drugs is a type of dosage forms which allows a two-fold reduction in frequency of dosage administered in the body.
