## Abstracts

The Fan-Out WLP technique involves cutting and separating the chip and then embedding the chip inside the panel. The procedure is to attach the chip face down to the Carrier, and the chip spacing should conform to the Pitch specification of the circuit design, while the receiver performs Molding to form a Panel. Follow-up will be separation, sealant panel and a vehicle for sealant panel Wafer shape, also called reconstruct Wafer (Reconstituted Wafer), can be widely used standard Wafer process, need is formed on the sealant panel circuit design. Since the area of the sealing panel is larger than that of the chip, not only can I/O contacts be made into the wafer area by Fan-In method; It can also be Fanned Out on a plastic mold to accommodate more I/O contacts.
