One of the most common parasitic diseases in poultry, requiring antibiotics, is still coccidiosis. It occurs due to the infection of coccidia in the intestine. Coccidiosis is still a serious disease in poultry and has the ability to economically disrupt the poultry industry. Therefore, appropriate control measures need to be taken to completely prevent it from happening. Comprehensive breeding systems and the use of anticoccidial drugs for prevention and treatment are the main requirements for curbing poultry coccidiosis. The use of natural / herbal extracts with anticoccidial properties is providing opportunities for new entrants.
