Abstracts

A fiber management system (FMS) manages optical fiber connections from outside of fiber rack to the fiber routers. Fiber-optic cable duct containing many fibers comes from far end sites and terminates on the FMS using splicing technology. FMS has fiber in and fiber out ports. From fiber out port the fiber patch will go to fiber optics based router.

FMS is a process by which a fiber network is managed. It tracks functions or attributes of the system such as schematic design, physical locations of assets, splice points (mechanical/fusion), and more. FMS can also be used to plan, design, build, operate, analyze, and troubleshoot fiber optic networks.
