Abstracts

The fiber bundle is considered to be the main element of a fiber optic cable. The optical fiber of which consists of a core, one or more shells, and one or more protective coatings. The core is the central part of the optical fiber, through which the main part of the signal power is transmitted. If the core is employed to transmit electromagnetic energy, then the shell is used for creating better reflection conditions at the core-shell interface, protecting the fiber core from mechanical damage, as well as protecting it from energy radiation to the surrounding space and absorbing unwanted radiation from outside.

The Fiber Optic Bundles industry can be broken down into several segments, Glass Fiber Optic Bundles, Quartz Fiber Optic Bundles, PMMA Fiber Optic Bundles, etc.
