## Abstracts

Fiber Optic Rotary Joints (FORJs) are the optical equivalent to electric slip rings. They allow for the uninterrupted transmission of optical signals while rotating around their shaft. Fiber Optic Rotary Joint (FORJ) is to optical signals what electrical slip rings are to electrical signals, one way to pass signals across rotating interfaces, particularly when transmitting large amounts of data. Fiber-optic rotary joints (FORJs) are widely used in the telecommunications industry and in defense technologies, such as with radars, robotic systems, oil drilling, unmanned craft, sensors, and other applications that require continuous rotation.
