## Abstracts

Film wound dressings are polymer membranes of varying thickness coated on one side with an adhesive. They are impermeable to liquid, water, and bacteria but permeable to moisture vapor and atmospheric gases. Transparency allows visualization of the wound. Indicated for partial-thickness wounds with little or no exudate, wounds with necrosis. May be used as either a primary or secondary dressing. Also used to cover IV sites, donor sites, lacerations, abrasions, and second-degree burns. Available in a wide variety of sizes, both sterile and in non-sterile.
