Abstracts

The production of parts by fine blanking requires not only the use of large thicknesses, but also the highest precision, flatness and cost-effectiveness. Fineblanking is a blanking process that produces finished parts with smooth, vertical cut surfaces and no tearing. This reduces or even eliminates the need for expensive secondary machining operations. Using specially designed presses, ready-to-assemble parts up to 15mm thick, stamped, bent and semi-blanked can be produced in a single stroke.
