Under high temperature and high humidity, the tensile strength of PPA (Polyphthalamide) is 20% higher than that of nylon 6 and higher than that of nylon 66. The bending modulus of PPA material is 20% higher than that of nylon, the hardness is greater, and it can resist the tensile creep for a long time. Moreover, the ability of PPA to resist gasoline, oil and coolant is stronger than that of PA. A high temperature resistant nylon, this material can withstand 200? continuous high temperature, and also can maintain good dimensional stability.
