Flat-rolled stainless steel is produced through melting and rolling, wherein the rolling process can be further categorized into two types, i.e., hot and cold. Flat-rolled stainless steel can be produced in various forms such as hot and cold sheets, coils, strips, and plates. Flat-rolled stainless steel products are preferred over other flat-rolled products due to their superior properties, including corrosion resistance, high ductility, attractive appearance, and low maintenance. Flat-rolled stainless steel is being used in various applications including water heaters, boilers, automobile parts, medical equipment, building, food processing equipment, marine components, kitchen essentials, compressor valves, and chemicals processing equipment, among others.
