Abstracts

Floating power plant plays a crucial role in electricity generation at remote areas where power generation is restricted due to scarcity of land mass. Shortage of electricity or the lack of access is one of the major development hurdles faced by many regions in developing countries. Moreover, in many countries, certain regions are not connected with their national distribution grid and off grid power is their only source of energy. In addition to that, growing concern about climate change and global warming are increasingly forcing nations to switch to renewable energy sources to meet their respective climate change targets.
