## Abstracts

The flotation machine rotor is a device that is easily worn in the flotation machine, and needs to be replaced frequently in the production practice of the concentrator. The flotation machine rotor produced by Hebei Jiding Environmental Protection Technology greatly prolongs the replacement cycle, which is a great leap in flotation machine technology. In the mechanical stirring flotation machine, the mixing of the pulp and the flotation agent, the suspension of the pulp, and the dispersion of the air bubbles are all completed by the strong rotation of the rotor of the flotation machine in the pulp.
