Abstracts

Fluoropolymer films consist of fluorine, carbon molecules and are high-performance polymer film. These films are widely used across high-temperature applications and extremely harsh chemical conditions. They are highly resistant to chemical, moisture, offer non-stick performance, and optical transparency. These films are widely used across packaging, electronics, automotive, construction, electrical, and aerospace. These films are used for cable insulation, composite mold release, roll covers, pharmaceutical liners, anti-corrosive linings, adhesives, photovoltaic cell, microphone membranes, surface coverings, airbags, anti-graffiti coverings, and fuel hoses. Moreover, they are also used across the pharmaceutical industry as blister packaging materials.
