Abstracts

Fly lines are an integral part of fly fishing. Generally, the length of the line is about 30 meters. The density of the flying line refers to whether the flying line is floating, sinking or partially sinking. Flywire taper refers to changes made to the flywire itself for better casting, the most popular and versatile is the weight nose cone. The flying wire is soft, not easy to produce memory effect, and the outer skin is relatively wear-resistant; the thickness changes evenly and has a long life.
