Abstracts

A foldable smartphone is a form factor of smartphone, which allows access to a larger, tablet-like display when needed by unfolding the device, whilst maintaining a similar footprint and functionality to a standard smartphone when folded (typically along a vertical axis). The screen may either wrap around to the back of the device when folded (as with the Royole Flexpai and Huawei Mate X), or use a booklet-like design where the larger, folded screen is located on the interior, and a screen on its 'cover' allows the user to interact with the device without opening it (such as the Samsung Galaxy Fold).

This report contains market size and forecasts of Foldable Phones in global, including the following market information:
