## Abstracts

Food traceability (tracking technologies) comprises the ability to identify and validate various stages of the food chain from production to distribution. It involves recognizing the origin of food and its destination from where it is expected to be distributed to different end users. This system is essential for food investigations and is crucial in global food trade as multi-ingredient food includes materials from variety of food chain & countries. This makes importers dependent upon traceability systems of other countries up to the point of import. The main applications of food traceability market include meat & livestock, fresh produce & seeds, dairy, beverages, fisheries, and others. The different equipment meant for supporting the system are PDA with GPS, thermal printers, 2D & 1D scanners, tags & labels, sensors, and others.
