## Abstracts

Flexible circuit board (FPC, Flexible Printed Circuit) is a circuit board made of flexible copper clad laminate as the base material. It is used as a medium for signal transmission in the connection of electronic products. Lightweight and flexible process. FPC can generally be divided into single-layer FPC, double-layer FPC, and multi-layer FPC. The functions of the power battery management system FPC mainly include: (1) monitor the voltage and temperature of the new energy power battery cells; (2) connect data acquisition and transmission and have its own overcurrent protection function; (3) protect the automotive power battery cells, the abnormal short circuit is automatically disconnected. Mainly used on the power square battery BMS, the general dosage is 3-70 pieces, instead of the traditional copper collection line.
