The fuel cell tester is mainly composed of a box, a refrigeration system, a heating system, a humidification system, an air circulation system and a control system. The outer shell of the box is made of cold-rolled steel plate electrostatically sprayed, and the inner tank is made of stainless steel plate. There is a large-area observation window in the middle of the box door, and is equipped with an observation light, so that the user can clearly see the test situation of the sample. The overall appearance is beautiful and generous. The thermal insulation layer is made of hard polyurethane foam and a small amount of ultra-fine glass wool, which has the characteristics of high strength and good thermal insulation.
