Gas turbine engines are primarily controlled by the amount of fuel supplied to the combustion chambers. With this in mind we can say that, the very simplest fuel control for a turbine engine is a fuel valve operated by the pilot. Many pre-production models of early turbojet engines featured just that, but it was soon found that this kind of control was difficult and dangerous in actual use. Closing the valve too quickly while trying to reduce power output could cause a lean die-out, where the airflow through the engine blows the flame out of the combustion chamber and extinguishes it. Adding fuel too quickly to increase power can damage the turbines due to excessive heat, or the sudden rise in combustion chamber pressure may cause a compressor stall. Another danger of too much fuel is a rich blow-out, where soaking the fire with fuel displaces the oxygen and lowers the temperature enough to extinguish the flame. The excess fuel may then be heated on the hot tailpipe and ignite, possibly causing damage to the aircraft.[1] For an aircraft engine, changes in airspeed or altitude cause changes in air speed and density through the engine, which would then have to be manually adjusted for by the pilot.

A fuel control unit attempts to solve those problems by acting as an intermediary between the operator's controls and the fuel valve. The operator has a power lever which only controls the engine's potential, not the actual fuel flow. The fuel control unit acts as a computer to determine the amount of fuel needed to deliver the power requested by the operator.

This report contains market size and forecasts of Fuel Control Unit in global, including the following market information:

Global Fuel Control Unit Market Revenue, 2017-2022, 2023-2028, ($ millions)

Global Fuel Control Unit Market Sales, 2017-2022, 2023-2028, (K Units)

Global top five Fuel Control Unit companies in 2021 (%)

The global Fuel Control Unit market was valued at million in 2021 and is projected to reach US$ million by 2028, at a CAGR of % during the forecast period.

The U.S. Market is Estimated at $ Million in 2021, While China is Forecast to Reach $ Million by 2028.

Hydromechanical Segment to Reach $ Million by 2028, with a % CAGR in next six years.

The global key manufacturers of Fuel Control Unit include Honeywell, Tarco Automation, Woodward, Aviation Industry Corporation of China, ZF Friedrichshafen AG, Continental AG, Denso Corporation, Hyundai Mobis and Autoliv. etc. In 2021, the global top five players have a share approximately % in terms of revenue.

MARKET MONITOR GLOBAL, INC (MMG) has surveyed the Fuel Control Unit manufacturers, suppliers, distributors and industry experts on this industry, involving the sales, revenue, demand, price change, product type, recent development and plan, industry trends, drivers, challenges, obstacles, and potential risks.

Competitor Analysis

The report also provides analysis of leading market participants including:

Key companies Fuel Control Unit revenues in global market, 2017-2022 (Estimated), ($ millions)

Key companies Fuel Control Unit revenues share in global market, 2021 (%)

Key companies Fuel Control Unit sales in global market, 2017-2022 (Estimated), (K Units)

Key companies Fuel Control Unit sales share in global market, 2021 (%)

Further, the report presents profiles of competitors in the market, key players include:

Honeywell

Tarco Automation

Woodward

Aviation Industry Corporation of China

ZF Friedrichshafen AG
