Abstracts

The popularity of full-screen displays has put forward production capacity and technology upgrade requirements for module manufacturers that produce full-scale displays. On the one hand, the processing difficulty of full-screen display modules has become more difficult, and the production process has become longer, resulting in a decrease in the capacity utilization rate of the industry, and new production capacity needs to be supplemented to meet the needs of the industry. On the other hand, the product processing accuracy requirements of full-screen display modules are higher. High, newer module processing technology and processing equipment are required to ensure the quality of full-screen products.
