Abstracts

Full suspension road bikes are built by adding suspension to the bike, and the suspension can do more than just increase ride comfort. It also increases the efficiency of the rider and bike as a system. The suspension separates the wheel from the rest of the bike, which substantially reduces bumps and vibrations caused by terrain changes during the ride. The bouncing action of the suspension makes pedaling at a certain speed require more effort.

This report contains market size and forecasts of Full Suspension Road Bikes in global, including the following market information:
