Abstracts

A fuse block can either be independent, where each fused circuit has an input wire and an output wire, or ganged, where power is shared among all the circuits. Fuse holders are devices for containing, protecting and mounting fuses. Independent fuse blocks require two wires to be run for each fuse, one from the power source, and one to the accessory. A ganged fuse panel requires a heavier power wire to be run to the panel, and a single wire runs out to each accessory in the system.
