The mouse is a hand-operated input device used to manipulate objects on a computer screen.

Whether the mouse uses a laser or ball, or whether it is wired or wireless, a movement detected from the mouse sends instructions to the computer to move the cursor on the screen in order to interact with files, windows, and other software elements.

Even though the mouse is a peripheral device that sits outside the main computer housing, it's an essential piece of computer hardware in most non-touch systems.
