## Abstracts

Gas Pressure thermometers are thermometers that measure temperature based on the relationship between the saturated vapor pressure and temperature of the evaporated liquid in a closed temperature measurement system. The pressure type thermometer creatively installs the sensor thermal resistance in the temperature measuring element, and realizes the mechatronic temperature measurement function. Formed a multi-functional serial temperature meter with a liquid pressure thermometer as the basic temperature measuring instrument for remote transmission, anti-vibration, anti-corrosion, electrical contact, and temperature signal transmission.
